

## ***KuroMulti***

---

***KuroMulti is an Oracle based, robust, scalable and tried and tested ERP*** solution suitable for any multi-level, large-population, small payment marketing setting. It cut its teeth several years ago as an application for network/pyramid marketing (a business process which is high on parametric complexity). It offers a well-crafted, complete business solution, integrating different activities and processes of any marketing organisation dependant on multilevel settings.

***KuroMulti*** is particularly applicable to retailing, courier, transportation and mail-order domains **but has application over a much wider range of activities because it can process millions of small transactions, each transaction rippling through and impacting several entities.**

***KuroMulti*** has provided a strong competitive advantage to those organisations for whom such a process is mission critical because even after a great deal of incremental growth it remains relatively free of patchwork. **It presents an opportunity for those who are in similar processes but require more agility in their IT systems or those who want to obtain competitive value by directly transacting with a much larger number of customers.**

### ***Salient features:***

- ➔ Based on enterprise strength Oracle8i/9i RDBMS to give true networked scalability
- ➔ Full compatibility on all Oracle supported platforms including WinNT, Linux, SCO, IBM, HP, OSF, etc.
- ➔ Support for advanced enterprise-level features like replication, materialised views, data partitioning, etc.
- ➔ Choice of Web, Client-Server, 3-tier Thin-Client or mixed deployment modes
- ➔ Highly scalable and robust internal design using CASE methodologies

- Integrated Consignee operations, Multiple branch/distribution sites, General Ledger accounting, Purchase and Accounts Payable, Inventory management, Accounts Receivable, Order processing and Invoicing, Dispatch and deliveries, . . .
